

PROFESSIONAL SUMMARY

Senior QA Automation Engineer with 8+ years of experience in manual and automation testing. Skilled in Java, Selenium, Playwright, REST Assured, and BDD/Cucumber, with strong hands-on experience in API testing, CI/CD integration, and test framework development. Known for improving test coverage, reducing release defects, and working closely with development teams throughout the SDLC. Open to relocation.

WORK EXPERIENCE

Lightbeam.ai Pune, India
Senior QA Automation Engineer / SDET July 2024 – May 2026

- Architected a modular Java automation framework covering UI, API, and E2E testing using Selenium, REST Assured, and TestNG; increased automated regression coverage by ~50%.
- Designed comprehensive REST API test suites (CRUD, negative, schema, and contract validation) using REST Assured and Postman; established service-level quality gates across microservices.
- Containerised test environments using Docker and orchestrated parallel test execution on Kubernetes (EKS), enabling scalable, consistent runs across CI pipelines.
- Integrated automated tests into Jenkins CI/CD pipelines with Maven, improving release reliability by ~40%.
- Validated cross-system payloads, API contracts, and data integrity across distributed microservices — preventing integration regressions in a cloud-native architecture.
- Stored and managed test execution reports on AWS S3, enabling centralised access, long-term retention, and easy sharing across distributed teams.
- Implemented Serenity BDD framework for living documentation and enhanced test reporting, improving visibility of test coverage for stakeholders.
- Managed test cases and tracked coverage using XRAY integrated with JIRA, providing real-time quality metrics across sprints.
- Championed testability during design phases; mentored team members on automation best practices and BDD/Cucumber adoption in Agile/Scrum ceremonies.

ITC Infotech Pune, India
QA Automation Engineer January 2022 – July 2024

- Built and maintained Selenium + Java + TestNG + BDD/Cucumber frameworks with Page Object Model; developed Playwright E2E test suites for modern web UIs — ensuring stable regression coverage across release cycles.
- Developed REST Assured and SoapUI API suites covering functional, negative, and edge-case scenarios; improved API test coverage by ~25% across backend microservices.
- Managed and organised test cases in TestRail; tracked execution results and reported test progress to stakeholders across release cycles.
- Integrated test pipelines into GitHub Actions; led test planning, effort estimation, and risk analysis in Agile/Scrum delivery.
- Managed defect lifecycle in JIRA — triaging, prioritising, and root-cause analysis — reducing resolution time and improving release quality.

Ignitiv Technologies Pune, India
QA Automation Engineer October 2017 – December 2021

- Designed Selenium (Java) UI automation suites from scratch using XPath strategies, reusable functions, and data-driven patterns to minimise maintenance overhead.
- Planned and executed regression, functional, smoke, and integration testing; contributed to framework-level upgrades as project complexity grew.
- Conducted peer reviews of test cases and defect reports; root-cause analysis to reduce defect resolution time and improve product stability.
- Performed manual testing on iOS and Android mobile applications — covering functional, usability, and regression scenarios across multiple device configurations.

TECHNICAL SKILLS

Languages: Java	UI Testing: Selenium WebDriver, Playwright
API Testing: REST Assured, Postman, SoapUI, Contract Testing, Schema Validation	BDD & Frameworks: Cucumber/Gherkin, Serenity BDD, TestNG, JUnit, Page Object Model (POM)
CI/CD & SCM: Jenkins, GitHub Actions, Maven, Git	Cloud & Infra: Docker, Kubernetes (EKS), AWS S3, GCP, Linux
Test Management: XRAY, TestRail, JIRA	Testing Types: Functional, Regression, Integration, E2E, Performance, Security

EDUCATION

Bachelor of Engineering — Computer Science Savitribai Phule Pune University, Pune, India
